

## STUDY WEEK “TechXperience”

### POSTER GUIDELINES

At the closing event on Friday, you will present your project on an A0-poster, which will be displayed at the venue.

In academia, posters are often used to present science projects. They summarize information concisely in an attractive manner and allow an exchange between presenter and audience without giving a talk. Most conferences include a poster presentation session in their programme. Therefore, the closing event of this study week is a good opportunity to acquaint yourself with this form of presenting data.

Posters should be in portrait format and DIN A0 size (84.1 cm x 118.9 cm).

**Please use the template to create your poster.**

Your poster should feature the following elements:

1. Introduction/Question
2. Material & Methods
3. Results
4. Discussion
5. Conclusion

Try to use the space wisely. Use appropriate font sizes and do not present too much text. Instead, include graphics, codes (?), pictures, and diagrams, which you will explain to interested audiences during the presentation.

The closing event is open to the public. Be prepared to answer some questions regarding your work.

Please make sure to finish and print your poster before you must leave for the train on Friday around noon or sooner (depends on your location). You can print the poster at your university. [Ask your tutor for further details and time management.](#)

Here you can find a link to the posters from our last “Coding Camp” study in [this folder](#) to have an idea how they can look like (as the TechXperience study week takes place the first time, we do not have poster examples)
